## Invertebrates

Invertebrates are the animals without a backbone or spinal column.

For example: starfish, jellyfish, octopus, worms, spiders, crabs and insects.

The invertebrates include the annelids, echinoderms, cnidaria, mollusks and arthropods.

Arthropods include insects, crustaceans and arachnids.

### Use the clues to identify the invertebrate group.

1. They have bodies that are divided into segments. Each segment is split into one or more rings. They don't have any limbs.

2. They have a soft, skin-like organ covered with a hard outside shell.

3. They are a group of marine animals and are found at every ocean depth. They have arms or spines that radiate from the center of their body.

4. They have six legs, three body parts (head, thorax, and abdomen) and one pair of antennae.

5. They have eight legs. They don't have antennae or wings.

6. They have a hard, external shell which protects their body and are found mostly in oceans.

7. They are found only in oceans and have umbrella like body with tentacles.

## Invertebrates - ANSWER KEY

Invertebrates are the animals without a backbone or spinal column.  
For example: starfish, jellyfish, octopus, worms, spiders, crabs and insects.  
The invertebrates include the annelids, echinoderms, cnidaria, mollusks and arthropods.  
Arthropods include insects, crustaceans and arachnids.

### Use the clues to identify the invertebrate group.

1. They have bodies that are divided into segments. Each segment is split into one or more rings. They don't have any limbs.

Annelids

2. They have a soft, skin-like organ covered with a hard outside shell.

Mollusks

3. They are a group of marine animals and are found at every ocean depth. They have arms or spines that radiate from the center of their body.

Echinoderms

4. They have six legs, three body parts (head, thorax, and abdomen) and one pair of antennae.

Insects

5. They have eight legs. They don't have antennae or wings.

Arachnids

6. They have a hard, external shell which protects their body and are found mostly in oceans.

Crustaceans

7. They are found only in oceans and have umbrella like body with tentacles.

Cnidaria
